

# MAXI SPREADER

For outstanding spreading performance and low energy requirement

The Maxi Spreader is a must for combines with large cutting headers. It is possible to spread very wide and to compensate in strong side wind. Therefore a very even spreading pattern can be reached.

The middle splitter which swings from side to side and the discs which have individual adjustable speed is the reason for good results. The spreading pattern can easily be adjusted from the cab.

Patent SE531230. Patent pending
